

Where the Conversion Leaks Are

allbirds.com · CRO Recommendations · August 2026

The most valuable conversion mechanism on this site is the product page's ability to convert visitors into buyers, but it is bleeding value due to missing price, add-to-cart CTA, size selector, and social proof, as evidenced by the 'Anytime Ankle Sock' page lacking these essential elements.

Sized opportunity

Prioritised findings

#	Finding	Severity	Effort	PXL
1	Multiple competing CTAs The hero has multiple CTAs of equal weight, diluting focus and reducing clicks.	High	Medium	5/10
2	Shipping delay notice A prominent shipping delay notice may deter purchases due to perceived risk.	High	Medium	5/10
3	Vague hero copy The hero headline is abstract and doesn't communicate the product category or benefit.	High	Low	5/10
4	Free shipping threshold hidden Free shipping threshold is buried in body text, causing surprise at checkout.	High	Medium	5/10
5	Mega-menu choice overload Mega-menu with 20+ items causes choice overload and decision paralysis.	High	Low	5/10
6	Missing price and CTA The product page lacks a visible price and add-to-cart button, preventing purchases.	Urgent	Medium	4/10
7	No responsive viewport declared Without a viewport meta tag, mobile users see a zoomed-out desktop layout, hurting usability and conversions.	Urgent	Medium	4/10
8	Missing size selector on PDP Product page lacks a size selector, increasing friction and potential returns.	High	Medium	4/10
9	Missing review count Product page lacks visible review count or rating, missing social proof.	High	Medium	4/10

#	Finding	Severity	Effort	PXL
10	Email-only signup lacks incentive The email signup offers no explicit benefit, reducing opt-in rates.	High	Medium	3/10

How to read this

Findings marked **verified** were measured directly and are reproducible. Everything else is a hypothesis derived from inspecting the live pages, which is why the PXL evidence questions score zero for those items. Sized opportunities describe the prize if a change works, not expected revenue: roughly 10–30% of A/B tests produce a significant win, and winners tend to overstate their true effect.
